

Robert Sabirov

Go / Golang Backend Engineer

Serbia / Remote | LinkedIn: [linkedin.com/in/robert-sabirov](https://www.linkedin.com/in/robert-sabirov) | GitHub: github.com/hydra13 | Website: hydra13.github.io

- Fully remote
- Part-time up to 10h/week
- Open to discussing fit
- No on-call

PROFILE

Software engineer focused on Go/Golang backend development, performance investigations, application security, and production-readiness. 14+ years of experience across backend systems, infrastructure tooling, frontend product development, industrial automation, and independent consulting.

Currently building production Go services in a high-scale marketplace environment, including billing-adjacent flows, tariffs, internal APIs, integrations, and security-sensitive backend logic. Experienced Security Champion with practical work in threat modeling, risk analysis, and secure engineering practices.

TECHNICAL SKILLS

Primary	Go (Golang), PostgreSQL, gRPC, REST APIs, production backend services
Backend	Microservices, internal services, integrations, business-critical and billing-adjacent flows
Databases	PostgreSQL, MySQL, ClickHouse, Elasticsearch
Infrastructure	Linux, Docker, Git, monitoring, metrics, dashboards, cloud storage integrations
Security	Threat modeling, risk analysis, Security Champion role, security-aware design
Languages	TypeScript, JavaScript, Node.js, Python, C++, C#, Bash, PowerShell
Frontend	React, TypeScript, Vue.js, Vue Router, Vuex, Vuetify, Jest
Industrial	SCADA, Siemens S7-300, TIA Portal, Step 7, SCL, FBD, WinCC

PROFESSIONAL EXPERIENCE

Back End Developer | Avito

Nov 2024 - Present

Production Go backend services in the delivery domain of a high-scale marketplace platform.

- Develop and maintain Go services for delivery-related business logic, delivery subsidies, transaction-based tariffs, and pay-per-view billing models.
- Work with PostgreSQL, gRPC, REST APIs, integrations, and internal services.
- Analyze trade-offs around reliability, correctness, maintainability, and performance.
- Participate in backend architecture discussions within service boundaries.
- Act as Security Champion, contributing to threat modeling, risk analysis, and security-aware engineering practices.

Frontend Developer | Avito

Apr 2023 - Oct 2024

Seller-side delivery flows for desktop and mobile web; later transitioned into backend engineering.

- Built delivery product flows using React, TypeScript, and Jest, with focus on reliability, performance, and conversion.
- Contributed to high-traffic product surfaces serving millions of marketplace users.
- Transitioned into Go backend development, working on delivery-related business logic and service integrations.

Independent Software Engineer - Consulting, Mentoring, Side Projects | Sabir LTD

Apr 2011 - Present

Independent consulting, mentoring, training, freelance, and side-project work alongside full-time roles.

- Clarify requirements, translate vague problems into technical scope, design pragmatic solutions, and build MVPs/prototypes.
- Provide code review, architecture feedback, technical mentoring, training, and knowledge sharing for developers and teams.
- Experiment with new technologies, AI-assisted development workflows, automation, and product ideas.

Senior Frontend Engineer - FinTech / B2B Payments | YooMoney

Sep 2021 - Apr 2023

Regulated fintech environment with high requirements for correctness, reliability, and security.

- Designed and implemented frontend features for B2B payment scenarios and integrated several payment methods into the main product.
- Worked with complex business logic, product flows, integrations, and internal tooling using TypeScript, React, Jest, and Nest.js as a BFF layer.
- Refactored legacy code, reduced technical debt, and participated in frontend architecture discussions and technical decisions.

Developer in Infrastructure Team (SRE / DevOps) | Yandex

Jan 2020 - Aug 2021

Distributed SRE/infrastructure team supporting internal systems and tooling for Yandex Search infrastructure.

- Built internal services, developer tools, CLI utilities, npm packages, and automation using JavaScript, TypeScript, Node.js, and Python.
- Worked with ClickHouse, monitoring systems, metrics, dashboards, cloud storage, and operational workflows.
- Migrated internal packages from JavaScript to TypeScript and collaborated closely with SRE engineers.

Senior Software Engineer / Team Lead | STC LLC

Apr 2014 - Jan 2020

Long-term role covering desktop applications, backend services, web development, infrastructure automation, and technical coordination.

- Developed C++/Qt desktop and network applications involving GUI, multithreading, networking, byte-stream processing, and binary protocols.
- Worked with SQL databases and Elasticsearch; built custom tools for traffic/protocol analysis and application-level data extraction.
- Designed RESTful APIs, implemented Node.js/Express backend services, and created an internal Vue/Vuetify SLA/Admin Dashboard with maps and graph analytics.
- Automated operational tasks using Linux administration, Bash, Python, and PowerShell scripts.

Industrial Automation Software Engineer | Cold Express LTD

Mar 2012 - Mar 2014

Industrial automation and control systems involving SCADA, PLC-based solutions, and operator-facing software.

- Developed control and visualization software using C++, C#, and Siemens automation technologies.
- Worked with Siemens Simatic S7-300, TIA Portal, Step 7, SCL, FBD, WinCC, and WinCC Flexible.
- Built a foundation in low-level programming, reliability, safety-critical thinking, real-world constraints, and industrial software integration.

EDUCATION

Petrozavodsk State University

2012 - 2016

Bachelor of Computer Applications, Computer Engineering
